

ANDREI CONSTANTIN PURCĂREAȚĂ

JUNIOR TECHNICAL ARTIST | REAL-TIME 3D ARTIST

London, UK | andreipurcareata@gmail.com | 07376 170920 | linkedin.com/in/andreicns | andreicns.artstation.com

PROFILE

Junior Technical Artist and real-time 3D artist with a broad 3D production foundation and an increasing focus on procedural content generation, artist-facing workflows and engine implementation. Experienced with Blender/Geometry Nodes, Substance 3D Painter, Unity, Unreal Engine and Houdini, with additional practical experience in game audio, VFX, UI and animation integration. Comfortable working from authored assets through technical setup and playable implementation, with a focus on efficient iteration and clear visual systems.

CORE SKILLS

Procedural / Technical: Blender Geometry Nodes, Houdini HDAs, RBD workflows, Houdini Engine, procedural asset systems, exposed artist controls

Engines / Integration: Unity URP, Unreal Engine 5, materials/shaders, post-processing, gameplay UI, VFX, asset implementation, ScriptableObject event architecture

Audio / VFX: Unity audio implementation and snapshots, interactive audio workflows, real-time VFX integration, working familiarity with Unreal Niagara

3D Production: Hard-surface, character and environment modelling, UVs, retopology, baking, PBR/stylised texturing, modular assets, level dressing

Character / Animation: Rigging preparation, Mixamo, AccuRig, animation integration, Animator setup, mocap testing and blending

Tools: Blender, Substance 3D Painter, Houdini, Photoshop, Illustrator, Premiere Pro, GitHub/GitKraken

SELECTED PROJECTS

Project Winterlight - Unity Dissertation | Jan-May 2026

- First-class dissertation and University of Greenwich Digital Shark Expo nominee. Built a playable boomer-shooter exploring real-time transitions between modern 3D presentation and a 1990s-inspired FPS state while keeping gameplay mechanically consistent.
- Designed a modular style-swap architecture using ScriptableObject event channels and a central manager to synchronise environment materials, enemy presentation, HUD assets, VFX, audio snapshots and post-processing.
- Authored the Khronovik weapon plus other 3D/2D gameplay assets, implemented presentation systems in Unity and supported the project with player-experience research.

Procedural Reactor Fracture Tool - Houdini / Unreal Engine 5 | Jan-Feb 2026

- Built a reusable Houdini Digital Asset for staged reactor destruction with exposed controls for wall thickness, fracture count/seed and crack generation, supporting rapid procedural variation without rebuilding the asset manually.
- Developed crack-generation and RBD destruction workflows in Houdini, then tested Houdini Engine integration and sequencing inside Unreal Engine.

Gladiator Ascendant - Global Game Jam | Jan-Feb 2026

- Led visual direction within the team and authored four PSX-inspired low-poly characters under strict jam constraints, using a reusable character workflow to maintain consistency while producing enemy and boss variations quickly.
- Developed a Blender Geometry Nodes environment-scattering workflow to accelerate arena dressing and iteration before Unity integration.

LumberJill: The RPG - Frontier Games Brief | 2025

- UI Designer and Character Artist on a collaborative mobile management-sim vertical slice, later nominated for the University of Greenwich Digital Shark Expo.
- Designed and implemented UI for tutorial flow, quests, management systems and player feedback; created two stylised characters and was a major contributor to the project's shared visual direction.

Ray Delgado - Stylised Real-Time Character Pipeline | Jan-Mar 2026

- Completed a full game-ready character pipeline from concept and high-poly sculpting through manual retopology, UV mapping, normal baking, PBR texturing, rigging preparation and Unity presentation.
- Built production-ready topology for an approximately 60k-triangle third-person character, including cloth-simulated clothing, then integrated Mixamo rigging and animation tests for gameplay use.

Additional work: CyberShadows - fully authored playable and enemy characters with rigging/animation and UE5 implementation; level assembled using third-party environment assets. Egyptian VR puzzle environment - called in as a backup 3D artist and delivered environment work within a 72-hour turnaround.

PROFESSIONAL EXPERIENCE

Young's Pubs - London | Feb 2026-Present

- Assistant General Manager (Aug 2026-Present) | Supervisor (Apr-Aug 2026) | Team Member / Bar Staff (Feb-Apr 2026)
- Promoted twice within six months; now supporting day-to-day venue operations, service leadership, team coordination, customer issue resolution and consistent standards during high-pressure shifts.

Inception Group / Cahoots London - Bartender | 2022-Feb 2026

- Progressed from junior to senior bartender in a high-volume immersive cocktail venue, maintaining themed presentation, guest experience, cocktail quality and fast team delivery under pressure.
- Contributed creatively to drink development, including an original cocktail selected for a London Cocktail Week feature.

Various Hospitality Roles - Romania & UK | 2016-2022

- Bar, waiter and customer-service roles across Romania and the UK, building a long-term foundation in reliability, teamwork, communication, service standards and adapting quickly to different venues.

EDUCATION

University of Greenwich - BSc Games Design & Development | 2022-2026 | Graduation expected Oct 2026

First-class dissertation: Project Winterlight. Relevant study includes real-time 3D art, Unity/Unreal development, Houdini procedural workflows, VFX, game audio, UI, gameplay presentation, production teamwork and immersion research.
