

ANDREI CONSTANTIN PURCĂREAȚĂ

JUNIOR TECHNICAL ARTIST | PROCEDURAL 3D

London, UK | andreipurcareata@gmail.com | 07376 170920 | linkedin.com/in/andreicns | andcns.github.io

PROFILE

Junior Technical Artist with a 3D production background and a growing specialism in procedural content generation, artist-facing tools and real-time implementation. Experienced with Blender Geometry Nodes, Houdini, Unity and Unreal Engine, alongside Substance 3D Painter and broader 3D production workflows. I enjoy building visual systems that make environments, assets and presentation easier to create, vary and iterate.

CORE SKILLS

Procedural / Technical: Blender Geometry Nodes, Houdini HDAs, RBD workflows, Houdini Engine, procedural asset systems, exposed artist controls

Engines / Integration: Unity URP, Unreal Engine 5, materials/shaders, post-processing, gameplay UI, VFX, asset implementation, ScriptableObject event architecture

3D Production: Hard-surface, character and environment modelling, UVs, retopology, baking, PBR/stylised texturing, modular assets, level dressing

Supporting: Rigging preparation, mocap retargeting, Mixamo, AccuRig, animation integration, real-time VFX

Tools: Blender, Substance 3D Painter, Houdini, Photoshop, Illustrator, Premiere Pro, GitHub/GitKraken, Trello

SELECTED PROJECTS

Project Winterlight - Unity Dissertation | Jan-May 2026

- First-class dissertation and University of Greenwich Digital Shark Expo nominee. Designed and built a real-time visual transformation system that switches a playable FPS between modern 3D presentation and a 1990s-inspired retro state while preserving the underlying gameplay.
- Created the system around synchronised environment materials, enemy presentation, weapon/ammo visuals, HUD, VFX, audio and post-processing, using a modular Unity architecture to keep each presentation state consistent.
- Authored the Khronovik weapon and key gameplay assets, configured and integrated the system in Unity, and iterated through testing and debugging to achieve a cohesive transition across the whole game.

Procedural Reactor Fracture Tool - Houdini / Unreal Engine 5 | Jan-Feb 2026

- Built a reusable Houdini Digital Asset for staged reactor destruction with exposed controls for wall thickness, fracture count/seed and crack generation, supporting rapid procedural variation without rebuilding the asset manually.
- Developed crack-generation and RBD destruction workflows in Houdini, then tested Houdini Engine integration and sequencing inside Unreal Engine.

Gladiator Ascendant - Global Game Jam | Jan-Feb 2026 | Module grade: 85

- Led visual direction and authored four PSX-inspired low-poly characters under strict jam constraints, using a reusable workflow to maintain consistency while producing enemy and boss variations quickly.
- Developed a Blender Geometry Nodes environment-scattering workflow to accelerate arena dressing and iteration before Unity integration.

LumberJill: The RPG - Frontier Games Brief | 2025

- UI Designer and Character Artist on a collaborative mobile management-sim vertical slice, later nominated for the University of Greenwich Digital Shark Expo.
- Designed and implemented UI for tutorial flow, quests, management systems and player feedback; created two stylised characters and contributed heavily to the project's visual direction.

Ray Delgado - Stylised Real-Time Character Pipeline | Jan-Mar 2026

- Completed a full game-ready character pipeline from sculpting and retopology through UVs, high-to-low normal baking, Substance texturing and Unity presentation.
- Prepared the character for animation using AccuRig, Mixamo and mocap retargeting in Blender with the Rokoko retargeting workflow.

CyberShadows - Unreal Engine 5 | 2024

- Fully authored the playable and enemy characters, including rigging/animation work and Unreal Engine 5 implementation.
- Integrated the characters and gameplay presentation in UE5 and assembled the level using third-party environment assets.

EDUCATION

University of Greenwich - BSc Games Design & Development | 2022-2026 | 2:1 | Awarded 18 Aug 2026

First-class dissertation: Project Winterlight. Relevant study includes real-time 3D art, Unity/Unreal development, Houdini procedural workflows, VFX, UI, game audio and production teamwork.

PROFESSIONAL EXPERIENCE

Young's Pubs - London | Feb 2026-Present

- Assistant General Manager (Aug 2026-Present) | Supervisor (Apr-Aug 2026) | Bar Staff (Feb-Mar 2026). Promoted twice within six months; support day-to-day operations, lead busy shifts, coordinate and train staff, handle stock and cash procedures, resolve guest issues and maintain service standards.

Inception Group / Cahoots London - Bartender | Jan 2022-Apr 2023 & Feb 2024-Feb 2026

- Progressed from junior to senior bartender in a high-volume immersive cocktail venue, balancing presentation, guest experience and fast team delivery under pressure. Contributed creatively to drink development, including an original cocktail selected for a London Cocktail Week feature.

Various Eateries PLC | Sep 2023-Jan 2024 | Waiter

Mitchells & Butlers PLC | Jun 2023-Aug 2023 | Bar Waiter

The Langton Arms | Feb 2018-Dec 2021 | Bar Waiter

S.C. Pactronic S.R.L. | Aug 2017-Jan 2018 | Club Waiter

Restaurant Mireille | Jun 2016-Aug 2016 | Barman
